# SPECIAL SERVICE TOOLS

FORD DIVISION • Ford Motor Company

## *Foreword*

The tools described on the following pages are especially designed by the Ford Division Service Department to help you to do specific jobs easier, faster and better — and at a minimum of tool expense. The use of a press is incorporated in many instances to make possible a simpler, more inexpensive tool. Where practical, tools are made from a tough aluminum alloy to reduce weight.

In designing Ford special service tools, prototypes and test units are used. These are disassembled and assembled as completely as possible with standard mechanics' tools. When, during disassembly or assembly, a point is reached where a special tool becomes necessary, or will obviously save a great deal of time, the Service Department designs the tool, has it made up, and tests it thoroughly before it is recommended.

Use of the recommended special service tools, therefore, will make money for your shop, for your mechanics, and will help further to improve the quality of the service shop work.

## CATALOG

### *General Information*

This catalog supersedes the Ford Passenger Car and Truck Special Service Tools Catalog, Form FD-7382, dated July 1956. It incorporates tools shown in previous catalogs plus other recently released Ford special service tools.

For quick reference all tools are listed numerically under the following groups: Front End, Rear Axle, Engine, Transmission, Power Steering, Select-Aire Conditioner and Miscellaneous.

Tool part number prefixes identify the tool. The first letter (T) identifies the item as a tool. The next two numbers identify the year that the tool came into use. The final letter of the prefix identifies the usage. The letter (P) indicates that the tool is used on the car. The letter (T) indicates truck usage. The letter (L) indicates that the tool is used on both cars and trucks, and the letter (S) indicates special usage. Unless otherwise indicated, car model application includes the Thunderbird.

To expedite handling of orders for Ford Special service tools, Ford Dealers are requested to order on Forms FD-419-L and forward direct to Ford Division of Ford Motor Company, Central Parts Depot, P.O. Box 2005, Livonia, Michigan. (See sample on next page.)

Fleet owners and independent garages may order these special service tools from their local Ford Dealer.

Ford Division reserves the right to make changes in design, material, specifications and prices without obligation.
